

BENEFITS

-  Reduce the risk of error during the setup of medical devices.
-  Efficient training - immersive application enhances information retention.
-  Multiple procedures in one application for iPad and the Microsoft HoloLens.

CHALLENGE

TRAINING AND CONFIGURATION OF COMPLEX MOBILE MEDICAL DEVICES

With a powerful range of capabilities, Getinge was looking for a way to effectively train doctors and nurses to harness the potential of the device to save lives. Since the device is portable, they also wanted a solution that could be re-used in daily real-life scenarios to replace complicated user manuals that inevitably get left in a draw to gather dust.

SOLUTION

ONE APP – MULTIPLE PROCEDURES MADE EASY

Getinge are now using REFLEKT ONE to create Augmented Reality applications to support doctors and hospital staff with training and configuration of their medical devices. Compatible with iOS, PulsioFlex AR guides staff and trainees through the setup of multiple PulsioFlex procedures. PulsioFlex AR is also available as a separate HoloLens application.
